Evaluating the Information Center

The Need for Self-Evaluation

Evaluating your library and information services is an important step in the process of continuous improvement. It is also useful as a means of communicating to funders and others evidence of the need for the program. People often become anxious over the thought of evaluation because many of us think of evaluation in terms of “accountability” or “judging.” A more helpful approach to self-evaluation may be summed up in this statement: Evaluation is gathering, analyzing, and applying information to improve your program. In evaluation one asks questions about the services and finds the information to answer them. The answers are used not only to determine how well the center has done but also to identify areas for improvement, to make services more efficient and effective.

The Link Between Evaluation and Center Goals

It is important to tie evaluation to the mission and goals of the information center. What services most clearly exemplify its reason for being? Determine a short list of those services the center is most interested in learning about, rather than attempting to learn everything. Then think about questions of effectiveness and efficiency in regard to those services.

Reviewing Services

Also known as “process evaluation” or “monitoring,” questions regarding the center’s services document the effort the program has put into achieving the goals consistent with its mission. Some examples:

- How many information requests did we respond to in the last fiscal year?
- How many information packets were sent out?
- Did the center serve its primary clientele?
- What channels or methods were used to respond to information requests?
- How many library materials were lent?
- What subjects was the center asked most frequently to supply information on?

These questions are most easily monitored on an on-going basis rather than
trying to assemble the information after the fact. One way of doing this is through the use of standard forms which describe the service as they are provided (see Figures 1 and 2). Having this information will make it easier to prepare periodic, such as monthly, reports of activities (see Figure X).

In designing forms to monitor center activity, be sure to include all relevant staff in the development stage of these forms. Ask them for feedback as they use the forms, so the forms may be modified over time.

Information Request Response (Check all that apply)

- Verbal information
- Number of free materials
- Number of photocopied items
- Library use of materials:
  - in-house
  - loan
- Total number of pieces of materials distributed

Note: The use of a numeric code allows fast tabulation of results.
Section 7. Evaluating the Information Center

Questions About Effectiveness

Once you have reviewed the center’s services, queries regarding effectiveness will help the center answer the question: “Did our services work?” They are also referred to as “outcome evaluation.” Some examples:

- How satisfied were users with materials received?
- How satisfied were users with information received? Was it timely? In a usable format? Thorough enough?
- What current materials and services are most useful to our users?
- In what areas can we provide more, and more useful, information?

These questions are often best answered through a survey of users.

Questions About Efficiency

Questions about effectiveness lead directly to questions about efficiency. These questions are about the cost of reaching the desired outcome. The cost can be in terms of dollars, staff time, planning time, or any other measurable resource. Some examples:

- How many dollars in grant money were accrued by your clientele as a direct result of information dissemination on grant funding?
- How many users saved funds by borrowing videos for preview, rather than paying for preview?
- How many community programs have used or developed handouts or curricula by using free materials you distribute, rather than purchasing such items?
- How much staff time have programs saved in tracking down statistics, program information, addresses, other sources of information by using your services?

When calculating the costs of a particular service, be sure to include all possible expenses. For example, photocopying of library items for users entails not only the cost of paper but rental of the copier, repairs, toner, staff time, wear on library materials, etc. Knowledge of actual costs of services is useful when planning. Coupled with what one learns about the users’ expressed value of individual services, this knowledge helps the center make decisions about which services are most cost-effective. This is especially useful when faced with difficult choices in service priorities.

Surveying Users

A survey of users is one means of gathering information about the center’s services. In designing a survey, limit it to questions that will provide informa-
tion the center can and will use. Consider how the center will use the information provided. For instance, if the survey asks a question about clientele served, does the center intend to modify services in order to better serve particular groups that may be missing? Be sure to limit questions in order to get answers to the most important ones and to insure a greater likelihood of response. When the center chooses a question for the evaluation, it must be able to repay the effort involved in asking and answering it. The questions need to be tied to the center’s mission and most important goals.

In designing a survey there are two types of questions: “closed” and “open-ended” questions. Closed questions force the respondents to fit their answers into the categories that are provided. Open-ended questions allow respondents to create their own categories. Closed questions provide information that is easier to tabulate; one can simply count the number of responses to various choices. Open-ended questions have the advantage of allowing for things that you may not have considered.

Questions that relate to satisfaction (happy-unhappy), or frequency (often-never) can be constructed using a Likert Scale. In creating such a scale it is helpful to define the different choices. Limit the number of choices because the center will not get any more information if there are 10 choices than if there are only four. Also, do not use an odd number of choices. Inevitably, the middle one is over-selected and treated as if it represents “average.” (See Figure 3 for examples of this kind of scale.)

### Designing a Survey

In designing a survey consider what information is already available through the record-keeping system of the center. Special questionnaires may be administered in person, by mail or over the telephone. Response rates will vary, depending on the method used. Each method has strengths and weaknesses, and varies in terms of cost. Interviews, by telephone or face-to-face, allow for interaction between the questioner and the respondent, and thus the ability to ask for more detail or clarification. Another method for eliciting information is through the use of a focus group. This is in essence a group interview, conducted by a facilitator, intended to cover a predetermined number of topics while also allowing for topics to arise which seemingly are important even if they are not part of the initial interview outline.

### Selecting a Sample

After the center has determined the questions to be asked, the next issue is determining to whom these will be directed. If it is everyone served by the center, that represents a population study. This is only possible if the center serves a small number of users, up to 100. When larger numbers of people are served, the center will only be able to survey a portion. Then the issue becomes
**Figure 4**

**User Survey: Sample Questions**

A. The center makes available the following materials. Please indicate how satisfied you have been with the materials you have received. Circle the number that most closely matches your assessment using the scale below.

<table>

Free Materials
- Books, pamphlets, resource guides
  - NA 1 2 3 4
- Newsletter
  - NA 1 2 3 4
- Bulletin of new materials
  - NA 1 2 3 4

Suggestions or Additional Comments: ____________________________________________

Materials For Sale
- Responses to telephone information inquiries
  - NA 1 2 3 4
- Information about workshops and training
  - NA 1 2 3 4
- Videotape rental
  - NA 1 2 3 4
- Borrowing books from the center
  - NA 1 2 3 4

Suggestions or Additional Comments: ____________________________________________

B. Please rate the following services offered by the center.

- Customer service when ordering materials
  - NA 1 2 3 4
- Responses to telephone information inquiries
  - NA 1 2 3 4
- Information about workshops and training
  - NA 1 2 3 4
- Videotape rental
  - NA 1 2 3 4
- Borrowing books from the center
  - NA 1 2 3 4

Suggestions or Additional Comments: ____________________________________________

C. On which subjects do you feel you need more information? (Check all that apply.)

- ____ Alcohol and other drug abuse prevention
- ____ Program evaluation
- ____ Prevention strategies, other than AODA
- ____ Special populations (specify)
- ____ Other (specify)
- ____ General treatment
- ____ Fund raising
- ____ Community development

D. From these items in the above list, what are the two subjects of greatest interest?

E. Have the center’s services been of assistance? _____Yes _____No

In what ways?
selecting those to be surveyed. The center may be particularly interested in those who use a particular service or represent a sub-group of clients. The task becomes selecting a sufficient number to have a range of responses and assuring that there is representation from all groups whose opinions are of interest. The Suggested Reading list includes materials on survey design and sampling.

Analyzing the Data

Before beginning to collect data, the center needs to have an analysis plan. This plan summarizes the ways in which the information collected answers the questions that were asked. If the center waits until after collecting the data, it may find that the analysis it wants to do demands data it did not collect. Or it may have collected data which has no real use.

Figure 5 summarizes major points in developing a plan for analysis.
Statistical Analysis

Data can be analyzed in two ways. The information can be considered descriptive or it may endeavor to look at relationships. (The latter is less likely to be applicable to the information center.)

Descriptive statistics answer questions such as:
* How many information and referral requests were completed?
* How many library materials were lent?

Figure 5

Developing a Plan for Data Analysis

1. Write -- THE QUESTION -- here.

2. Who is interested in my results?

3. What descriptive information will I report?
   1.
   2.
   3.
   4.
   5.

4. What methods of analyzing relationships will I use?
   a. Contingency tables?
   b. Comparisons of means?
   c. Correlation?

5. How will I define a difference that is meaningful in a practical sense?

6. Which test of significance will I use? Why?

What is the composition of users, e.g. individuals or organizations, and what kinds of individuals or organizations?

What topical areas represent the largest numbers of information requests?

What are the characteristics of those served by our users?

Relationship statistics examine possible relationships between things. An example might be that book circulation declines as videotape use increases. If you wish to find effects that are statistically significant you should start by consulting publications on the Suggested Reading list to learn about data analysis and then work with an evaluator.

Summarizing the Findings

It is important to communicate the findings of the evaluation in ways that are usable and appropriate. Questions to be addressed include: Who needs to know what, when, and for what reason? What is the best way to communicate specific findings to specific audiences? Sometimes it is helpful to present the findings orally as well as in writing. Is a final report required? If so, what will be included in the final report?

Using the Results

It is important to view an evaluation not as a judgment of the program or services but as an effective tool for continuous improvement. Involve all staff in using evaluation results to change programs and their priorities. Connect any planned changes to specific information gained from the evaluation. Prioritize changes based on effort involved in carrying them out and the potential for improvement of user satisfaction. Making actual improvements based on the data is an important step in confirming for staff and respondents that their time was well spent.

Suggested Reading

Straightforward advice on conducting effective program evaluation. Step-by-step format to receive clear answers to questions, collect data, present findings and apply the results. For novices and experienced program evaluators. Available in French as well as in English.

Hawkins JD; Nederhood B. Handbook for Evaluating Drug and Alcohol Prevention Programs: Staff/Team Evaluation of Prevention Programs (STEPP). Rockville, MD: Office of Substance Abuse Prevention, Division

A step-by-step guide for organizing and carrying out an evaluation, and analyzing and reporting the results. An excellent tool for those new to evaluation.

Part of the CSE Program Evaluation Kit (9 vols.), this publication provides an overview of evaluation activities. It includes specific guides for accomplishing three types of studies: a formative evaluation, a standard summative evaluation, and a small experiment or pilot test.

Includes steps in designing program evaluations and implementing an evaluation design. Illustrates principles with an in-depth case study.

This publication came out of a series of five tutorials on evaluation for libraries, and includes lessons in several areas with associated readings. It connects evaluation to planning. The authors suggest that evaluation needs to be used as a tool for moving toward library goals, rather than simply answering the question “How good is it?”

An excellent resource when asked questions about accountability. Presentation is very clear with overviews for each topic. Strength of book is the statistical measure section which includes charts, tables and very good “how to” instructions.

This article looks at productivity measures as a performance assessment tool. It compares productivity measurements with other evaluation tools used in special libraries, such as cost-benefit analysis, value appraisals, and quality measures.

This publication ties evaluation into the library planning process. It uses the TELL IT! approach, offering practical steps in doing library evaluation. The authors focus on evaluation as an improvement tool.
